Dear BrainWare Safari team,

I am pleased to share this letter of support of BrainWare Safari software. As you know, Edgar Evans School 11 posted fantastic gains in student achievement after just one year using this software. Our children gained as many as three grade levels using BrainWare Safari, in large part because they found the software to be not only fun but engaging.

When I initially compared the pre- and post-test results, it seemed unbelievable that our children could have progressed so much in so little time. However, I trust the Woodcock-Johnson test and I've listened to what my teachers have said about how their students improved as they used the program.

The key to BrainWare's success is in its ability to strengthen children's cognitive skills: visual processing, auditory skills, logic and memory. The software serves as a gym, except children are exercising their brains, not their muscles. The result: students who are able to perform at a higher level in their schoolwork and in their lives beyond school.

I would recommend BrainWare Safari to my colleagues without hesitation. I hope to be able to provide this invaluable software to many more generations of children who attend my school.

Sincerely,

A handwritten signature in black ink that reads "Stan Law". The signature is fluid and cursive, with the first name "Stan" being more prominent than the last name "Law".

Stan Law
